

[WEBSITE DESIGN & BUILD]

Madane Design Workshop

website experience.

An editorial, architecture-grade web presence for a residential architecture and interior studio — built to make the work feel inevitable: quiet, precise, monochrome, and uncompromisingly clean.

CLIENT

Madane LLP — Design Workshop

PREPARED BY

Athreix Innovations LLP

SCOPE

Marketing website · CMS · Portfolio

STATUS

For review

01 Project Overview

Madane Design Workshop designs the interior and exterior of homes — architecture, interiors, and turnkey execution. The website's single job is to convert that craft into trust: a prospective homeowner or developer should land, feel the quality in the first three seconds, browse the work the way they would walk through a finished home, and leave an enquiry without friction.

The problem we are solving

Architecture is bought on confidence. Most studio sites bury the work under stock imagery, dense paragraphs, and generic “premium” styling that signals nothing. Madane's portfolio deserves a frame that disappears — letting space, material, and light do the selling.

The opportunity

A restrained, gallery-grade site that ranks for local intent, photographs the work honestly, and turns browsing into qualified enquiries. The bar is not “a nice website” — it is a site indistinguishable in polish from yodezeen.com and an Apple product page.

What “done” looks like

- A homepage that communicates discipline and scale within one viewport.
- A projects archive that feels like an exhibition, not a gallery plugin.
- Project case studies with a clear narrative: brief → site → response → result.
- Sub-1.5s perceived load, buttery scroll, no layout shift.
- A CMS the Madane team can run without a developer.
- A measurable lift in qualified enquiries.

This document is the single source of truth for scope, design language, and acceptance. Anything not specified here is out of scope until amended in writing.

02 Goals & Success Metrics

Goals are split into what the business needs and what the experience must deliver. Each is paired with a measurable target so success is not a matter of opinion.

Business goals

- **Generate qualified enquiries** from homeowners, developers, and channel partners.
- **Establish authority** as a serious residential architecture & interiors studio.
- **Showcase range** across architecture, interior, exterior, and turnkey work.
- **Reduce sales friction** — let the site pre-sell so first calls start warm.
- **Own local search** for relevant architecture/interior intent.

Experience goals

- **Instant credibility** — quality legible in the first viewport.
- **Effortless browsing** — the archive invites a long, calm scroll.
- **Honest imagery** — the work is the hero; UI recedes.
- **One obvious next step** on every page: see work, or enquire.
- **Flawless on mobile** — most first visits will be a phone.

Key performance indicators

METRIC	TARGET	HOW IT IS MEASURED
Qualified enquiries / month	Baseline +40% within 90 days	Form + WhatsApp + call events
Enquiry conversion rate	≥ 2.5% of sessions	Goal completions / sessions
Largest Contentful Paint	≤ 1.8s (mobile, 4G)	Lighthouse / field CrUX
Cumulative Layout Shift	≤ 0.05	Core Web Vitals
Avg. projects viewed / session	≥ 3	Project-detail pageviews
Lighthouse (Perf/SEO/AIly)	≥ 95 each	CI Lighthouse run
Bounce on homepage	≤ 40%	Engaged-session rate

03

Audience & Personas

Three audiences carry most of the value. The site is sequenced for the first, but must serve all three without a single dead end.

[PRIMARY]

The Homeowner

Building or renovating a private residence. Emotionally invested, design-literate, comparison-shopping 3–5 studios. Needs to *feel* the quality and see homes like the one in their head. Decides on portfolio + trust.

[SECONDARY]

The Developer / Builder

Commissioning multiple units or a project. Cares about delivery, process, and consistency at scale. Scans for credibility, breadth, and whether the studio can be trusted on timelines.

[TERTIARY]

The Referrer / Press

Past clients, peers, journalists, vendors. Need fast access to specific projects and a clean way to share or contact. Reward an archive that is easy to link into.

Top user journeys (the site must make these frictionless)

#	JOURNEY	PATH THROUGH THE SITE
J -1	“Show me you’re good.”	Home → Projects → Project detail → Contact
J -2	“Are you right for <i>my</i> kind of home?”	Home → Services → Filtered Projects → Contact
J -3	“Who are you and how do you work?”	About → Process → Projects → Contact
J -4	“I was referred — show me that one project.”	Deep link → Project detail → Related → Contact

04 Reference Benchmark

Four references define the bar. We take one specific, defensible idea from each — not a wholesale copy. The synthesis is Madane's own: editorial, monochrome, image-led.

REFERENCE	WHAT WE TAKE	WHAT WE DELIBERATELY LEAVE
yodezeen.com /projects	The archive as an exhibition — large, calm project tiles; restrained typography; the work carrying the page.	Nothing essential — this is the closest north star for the Projects experience.
Architecture site Dribbble ref	Dark editorial hero, confident headline scale, “projects completed” proof stat, sectioned story-scroll.	Heavy dark-on-dark everywhere; we use dark as accent, not default.
GrandPool Dribbble ref	Soft rounded cards, generous whitespace, friendly information density for the Services/teaser blocks.	Bright blue palette and gradients — off-brand for Madane's neutral system.
Apple — iPhone 17 apple.com	Scroll-choreographed reveals, enormous whitespace, one idea per section, pixel discipline, motion that feels physical.	Product-marketing density; we keep copy sparse and gallery-like.

Design principle, stated once: **the interface should be invisible**. If a visitor remembers a button, a gradient, or an animation instead of a building, the design has failed.

Madane's web identity is monochrome editorial with two temperatures of neutral — a cool stone and a warm sand — used sparingly against near-black and off-white. The result reads as architecture, not as a tech product.

Tone

- **Quiet, not loud.** Confidence through restraint.
- **Editorial, not corporate.** Think design monograph, not brochure.
- **Material, not decorative.** Texture comes from photography and paper-like neutrals, never from ornament.
- **Spacious.** Whitespace is the primary design material.

Imagery rules

- Full-bleed, high-resolution, true-to-life — no stock, no heavy filters.
- Consistent crop discipline: a defined set of aspect ratios only.
- Architectural photography respects verticals; no distortion.
- People are incidental; the home is the subject.

Layout signature

- Strict 12-column grid with generous gutters; frequent asymmetry.
- Hairline rules and mono “bracket” labels as the only chrome — e.g. [Selected Work].
- Oversized headline type set tight; long-form copy set calm and small.
- Section index numbers (01 / 02 / 03) as a quiet editorial spine.

The “bracket label” motif

Borrowed from the supplied art-direction board: monospaced labels in square brackets mark every section. It is the site's signature and appears in nav, section heads, and captions.

The tokens below are taken directly from the supplied brand board and are binding. Build them as CSS custom properties / Tailwind theme values so the whole site updates from one source.

6.1 Typography

Headings set in **Gantari** (geometric, low-contrast, architectural). Body and UI set in **Poppins**. Self-host both as variable/woff2 with `font-display: swap`. A monospace (system mono / IBM Plex Mono) is used only for bracket labels and indices.

Gantari · Display · 64/1.0 · -2%	We design homes, inside
Gantari · H1 · 40/1.05	Selected Work
Gantari · H2 · 28/1.1	A studio of architecture
Poppins · Lead · 18/1.5 · 300	Quiet, precise residential design.
Poppins · Body · 16/1.6 · 400	The interface should disappear so the work can speak.
Mono · Label · 12 · +18% · UC	[SELECTED WORK]

Type scale (px): 12 · 14 · 16 · 18 · 24 · 32 · 40 · 56 · 72 · 96. Body 16/1.65. Max line length 66–72ch for long-form. Headings tracked -1% to -2%.

6.2 Colour

			
#262626	#F7F7F2	#DEDBE6	#EAE3D9
Ink — text, dark sections, footer	Paper — primary background	Cool stone — section tint, hovers	Warm sand — accent blocks, cards

Usage discipline: ~90% of every page is Ink + Paper. The two neutrals (stone, sand) appear only to separate sections or warm a card — never as decoration. No additional colours, gradients, or brand accents are introduced. Pure white (#FFF) is reserved for image mounts; #F7F7F2 is the working background.

6.3 Grid, spacing & radius

TOKEN	DEFINITION
Grid	12 columns · 1280px max content · 24px gutter (desktop) · 4 cols / 16px (mobile)
Spacing scale	4 · 8 · 12 · 16 · 24 · 32 · 48 · 64 · 96 · 128 (8px base rhythm)
Section padding	120–160px vertical (desktop), 64–80px (mobile)
Radius	0px structural surfaces; 12–16px on soft “GrandPool-style” teaser cards only

TOKEN	DEFINITION
Borders	1px hairline @ #E4E4E2; 1.5px @ Ink for emphasis rules

6.4 Core components

Buttons

Primary: Ink fill, paper text.
 Secondary: hairline outline.
 Tertiary: underlined text link.
 One primary CTA per view.
 No drop shadows.

Project tile

Image + mono index +
 project name +
 location/year. Hover: subtle
 zoom (1.03) + caption fade-
 in. Defined ratios only.

Navigation

Minimal top bar; logo left, [menu] right. Mobile = full-
 screen overlay menu with
 large type.

Section header

Index number + mono
 bracket label + Gantari H2 +
 hairline rule. The site's
 repeating editorial unit.

Forms

Underlined inputs, generous
 spacing, inline validation,
 single column. WhatsApp +
 call alternatives beside.

Footer

Ink background, large studio
 name, sitemap, contact,
 socials, credits. The calm full
 stop.

6.5 Motion principles (Apple-grade)

- Reveal on scroll: opacity 0 → 1 + 16px rise, 600–800ms, custom ease `cubic-bezier(.16, 1, .3, 1)`. Once only, never on re-entry.
- Image parallax limited to 6–10% travel — felt, not seen. Disabled below tablet.
- Hover and page transitions ≤ 300ms. No bounce, no spin, no decorative loaders.
- Strictly honour `prefers-reduced-motion`: all motion becomes an instant cross-fade.

07 Information Architecture

A shallow, obvious structure. A first-time visitor should never be more than two clicks from the work or the enquiry form.

Fig. 7.1 — Primary sitemap. Dashed nodes are dynamic, CMS-driven templates.

Global navigation

Persistent slim header: **Logo** (left) · **Studio · Projects · Services · Process · Contact** (center/right) · [**Enquire**] button. Header turns from transparent to solid Ink/Paper on scroll. Footer repeats full navigation + contact + socials.

08 Page Requirements

Each page is specified as a vertical sequence of sections. Order matters — it encodes the persuasion sequence. Every page ends with a single, unmissable path to enquire.

8.1 Home

#	SECTION	REQUIREMENT
H1	Hero	Full-bleed signature project, tight Gantari headline (e.g. “We design homes, inside and out”), one-line sub, single primary CTA. One viewport, no carousel.
H2	Proof stat	Quiet credibility row — projects completed, years, cities. Mono numerals, large.
H3	Selected work	4–6 hand-picked projects as large editorial tiles (yodezeen feel). “View all work” link.
H4	Studio intro	Two-sentence philosophy + portrait/site image. Link to Studio.
H5	Services teaser	Four soft cards (GrandPool density): Architecture · Interior · Exterior · Turnkey.
H6	Process strip	Three to five steps, mono-numbered, horizontal on desktop.
H7	Enquiry band	Full-width Ink section: headline + CTA + WhatsApp/call. The page's full stop.

8.2 Projects (archive)

The flagship experience — modelled on yodezeen/projects. A calm, scrollable exhibition of all work.

- **Filter bar:** by type (Architecture / Interior / Exterior / Turnkey) and optionally by location. Filtering is instant, animated, URL-synced, no page reload.
- **Grid:** large two-up / staggered tiles, generous spacing; lazy-loaded; on hover a subtle zoom + caption (name · location · year).
- **Loading:** progressive / “load more” rather than numbered pagination; preserves the contemplative scroll.
- **Empty & deep-link states** handled gracefully; every filter combination is shareable via URL.

8.3 Project detail (case study)

#	BLOCK	REQUIREMENT
P1	Cover	Full-bleed hero image, project name, location, year, type, area. Mono meta row.
P2	Narrative	Short editorial: the brief, the site, the response. ≤ 150 words. No jargon.
P3	Gallery	Mixed-ratio image sequence — full-bleed, two-up, detail crops. The core of the page.
P4	Facts	Spec list: area, year, location, scope, services, status.
P5	Next / related	“Next project” + related-by-type tiles to keep the journey going.

#	BLOCK	REQUIREMENT
P6	Enquire	"Start a project like this" CTA → Contact (pre-tagged with project).

8.4 Studio (About)

- Studio philosophy in editorial long-form; restrained, first-person, no clichés.
- Optional team grid (portraits + roles), studio image, milestones/recognition.
- Soft CTA into Projects and Contact.

8.5 Services

- One clear section per service (Architecture, Interior, Exterior, Turnkey): what it includes, who it's for, representative projects pulled live from the archive.
- Each service deep-links into a filtered Projects view.

8.6 Process

- The studio's working method as a clear, numbered sequence (e.g. Discovery → Concept → Design Development → Execution → Handover).
- Reassures developers and first-time homeowners; reduces "what happens next" anxiety.

8.7 Contact / Enquire

- Single-column enquiry form: name, contact, project type, location, budget band (optional), message. Inline validation, spam protection, success state.
- Direct WhatsApp + call + email beside the form (most Indian enquiries prefer WhatsApp).
- Studio address with embedded map; office hours; socials.
- Submissions routed to email/CRM/WhatsApp with auto-acknowledgement.

8.8 Journal – phase 2

Optional insights/press section for SEO and authority. Article template + index. Deferred to phase 2 unless content is ready at launch.

8.9 System pages

404 (on-brand, routes back to Projects), privacy policy, terms. All inherit the design system.

09 Functional Requirements

ID	CAPABILITY	REQUIREMENT
F - 1	Project CMS	Madane can create/edit/reorder projects – images, meta, narrative, type, location, year – with live preview. No developer required.
F - 2	Media handling	Auto-generated responsive sizes + AVIF/WebP, lazy-loading, CDN delivery, alt-text fields enforced.
F - 3	Filtering	Client-side instant filter on Projects by type/location, URL-synced and shareable.
F - 4	Enquiry form	Validated, spam-protected, routed to email/WhatsApp/CRM, with auto-reply and stored record.
F - 5	Navigation	Sticky adaptive header + full-screen mobile menu; active-state aware.
F - 6	Service → work link	Services deep-link into pre-filtered Projects views.
F - 7	SEO controls	Per-page title/description/OG image editable in CMS; auto sitemap + schema.
F - 8	Analytics events	Track enquiries, WhatsApp/call clicks, project views, filter use, scroll depth.
F - 9	Journal (P2)	Article authoring + index, same media pipeline.

10 Technical Requirements

A modern, fast, maintainable stack. Final choices are Athreix's to confirm at kickoff; the recommendation below optimises for performance, editor experience, and longevity.

FRAMEWORK	Next.js (App Router) – SSG/ISR for instant loads and clean SEO.
STYLING	Tailwind CSS with the design tokens above as the single theme source.
CMS	Headless (Sanity / Payload / Strapi) – structured project + service models, live preview.
MOTION	Framer Motion / CSS, reduced-motion aware, no heavy animation libraries.
MEDIA / CDN	Next/Image or image CDN; AVIF/WebP; global edge caching.
HOSTING	Vercel / Netlify edge, or equivalent, with preview deploys per branch.
FORMS	Serverless handler → email + WhatsApp API/CRM webhook; honeypot + rate-limit.
BROWSERS	Latest 2 versions of Chrome, Safari, Edge, Firefox; iOS & Android Safari/Chrome.

11 Performance, SEO & Accessibility

Performance

- LCP $\leq$ 1.8s mobile / $\leq$ 1.2s desktop.
- CLS $\leq$ 0.05; reserved image dimensions.
- Lighthouse Perf $\geq$ 95.
- Aggressive image optimisation + edge caching.
- No render-blocking third-party scripts.

SEO

- Semantic HTML, clean URL slugs.
- Per-page meta + OG/Twitter cards.
- Schema: Organization, LocalBusiness, project items.
- XML sitemap + robots; canonical tags.
- Local intent: city/area keywords in copy + metadata.

Accessibility

- WCAG 2.1 AA target.
- Keyboard-navigable; visible focus.
- Alt text enforced in CMS.
- Contrast holds within monochrome system.
- Reduced-motion fully honoured.

Responsive behaviour

BREAKPOINT	WIDTH	BEHAVIOUR
Mobile	$\leq$ 640px	Single column, full-screen menu, parallax off, tap targets $\geq$ 44px.
Tablet	641–1024px	Two-up project tiles, condensed nav, reduced section padding.
Desktop	1025–1440px	Full 12-col grid, staggered archive, full motion.
Large	$>$ 1440px	Content capped at 1280–1440px; margins grow, content does not stretch.

12 Delivery Plan

Phased so Madane sees direction early and signs off at each gate. Indicative durations — confirmed at kickoff against final scope and content readiness.

PHASE	STAGE	OUTPUT	EST.
00	Discovery & content	Sitemap sign-off, content/asset gathering, photography audit.	1 wk
01	Design — key screens	Home, Projects, Project detail in hi-fi (desktop + mobile).	1.5–2 wks
02	Design — full set	Remaining pages, components, prototype, design QA.	1.5 wks
03	Build — front end	Component library, all pages, motion, responsive.	2.5–3 wks
04	CMS & integration	CMS models, content migration, forms, analytics, SEO.	1.5 wks
05	QA & launch	Cross-device QA, performance pass, handover, go-live.	1 wk

Critical dependency: project photography and copy. The site is only as good as its images — high-resolution, consistent photography is the single biggest driver of the “yodezeen / Apple” quality bar.

Madane to provide

- High-resolution project photography (the priority asset).
- Project metadata: name, location, year, area, scope, status.
- Studio bio, philosophy, team details & portraits.
- Logo / wordmark in vector, plus any brand assets.
- Contact details, address, socials, WhatsApp number.
- Domain & DNS access; timely review at each gate.

13 Scope, Assumptions & Sign-off

In scope

- Design + build of all pages in §8 (excluding Journal unless content is ready).
- CMS setup, content migration of an agreed project set, forms, analytics, SEO, launch.
- One round of revisions per design gate.

Out of scope (unless added)

- Photography / videography production.
- Copywriting beyond light editorial polish.

Assumptions

- Content & photography supplied on the agreed schedule.
- One consolidated set of feedback per gate.
- English-only at launch.
- Final stack confirmed at kickoff.

Risks

- Low-quality imagery → undermines the entire quality bar.
- Scope creep at design gates → timeline slip.

- E-commerce, client portals, multilingual, blog backlog.
- Ongoing maintenance (separate retainer).
- Late content → launch date moves.
